LMC 2700 : Milestone 5 - Presentation Build
Ryan Nguyen, Daniel Lee

Self Assessment Paragraphs:

(Ryan's) Overall, the whole project was a success and I had a lot of fun when we were designing the puzzles, however, using p5js as a game development tool was far from the capability and ease of use I had with Unity–especially with ctrl-f because I literally could not use it for some reason. I learned a lot about intuition for UI development though, learning to really draft what I have in mind before creating it. This not only singled out the issues I needed help on from AI, but also just let me flesh out my design choices more.

(Daniel's) I enjoyed designing the puzzles and creating the layout and VFX based on the movie and terminal styled technology I think the biggest issue for me was similarly having to work with p5js and struggles with having to make large UI layouts compared to previous projects where we only had to create simple systems. It was also a bit difficult to organize code on p5js since there's no way to split different scenes into multiple files (at least that I know of).

AI Usage Statement:

AI tool used: Claude
Date Used: April 22, 2026
Prompt summary : Help us create a green-effect, like the ones seen in those old agent themes
What part of the project was affect: Central UI
What you kept, changed, or rejected: Kept the green theme
Confirmation that you understand the final code/images you submitted: Yes.

AI tool used: Codex
Date Used: April 23, 2026
Prompt summary: Help us create a horizontal translucent rectangle moving up and down the screen like a scanner
What part of the project was affected: The challenges.
What you kept, changed, or rejected: Kept the rectangle to create the cool effect, changed the color to match the theme.
Confirmation that you understand the final code/images you submitted: Yes.

AI tool used: Codex

Date Used: April 25, 2026
Prompt summary: Show us how to make a loading bar for this
What part of the project was affected: Main screen, circuits
What you kept, changed, or rejected: Expanded the loading bar to fit well
Confirmation that you understand the final code/images you submitted: Yes.

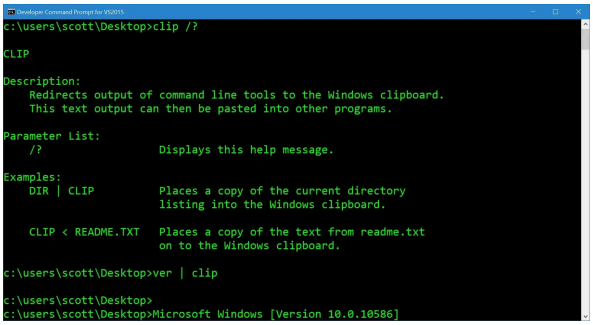
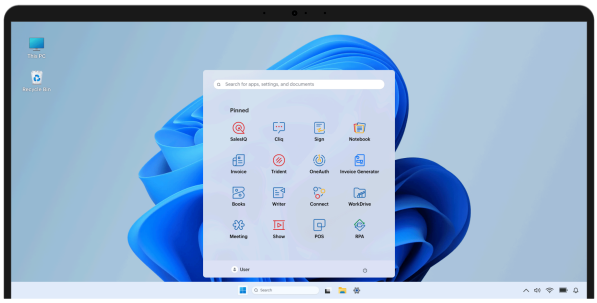
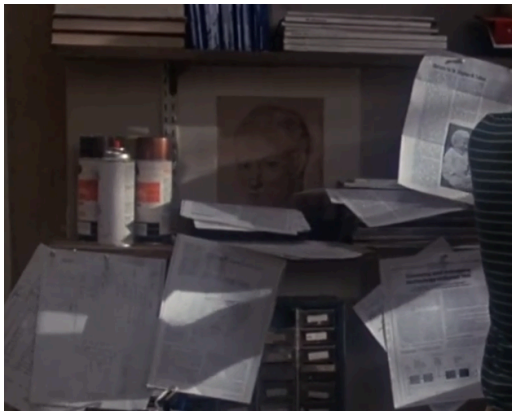
Image References for UI:

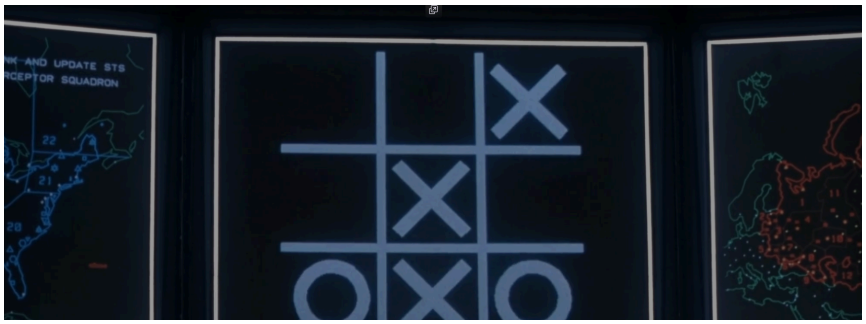




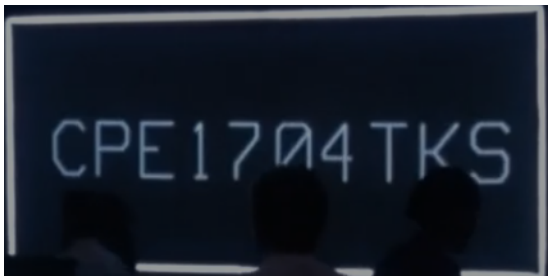
-Terminal / Lobby UI VFX and Layout reference images



- News Papers, and Joshua Falken Password



Multiple Tic Tac Toe boards were flashed to represent the AI from playing against itself, we used this to create a Cipher code.



Letters constantly unscrambled as time went on to show the AI had gotten closer to obtaining the password or in this case failure.
